## Guidelines:

- This guide is intended for those to return-to-run following a rest period of less than 3 weeks
- The walking portion of the intervals should be done at a moderate pace.
- Stop running if you feel yourself limp, experience pain, or note increase in swelling
- If pain/swelling increase following your run, take 1 day off or wait until symptoms subside. If this happens again, seek care from your health care provider.
- Cross-training should be medium-intensity and low impact. Examples could include swimming, biking, or use of an elliptical.
